

Lab 6 | Microsoft Entra ID MFA

Identity & Access Management Portfolio | Jovar McNamee

Objective

Configure and test Microsoft Authenticator for a lab user, investigate sign-in events, and verify that Microsoft Entra ID accepted the MFA requirement.

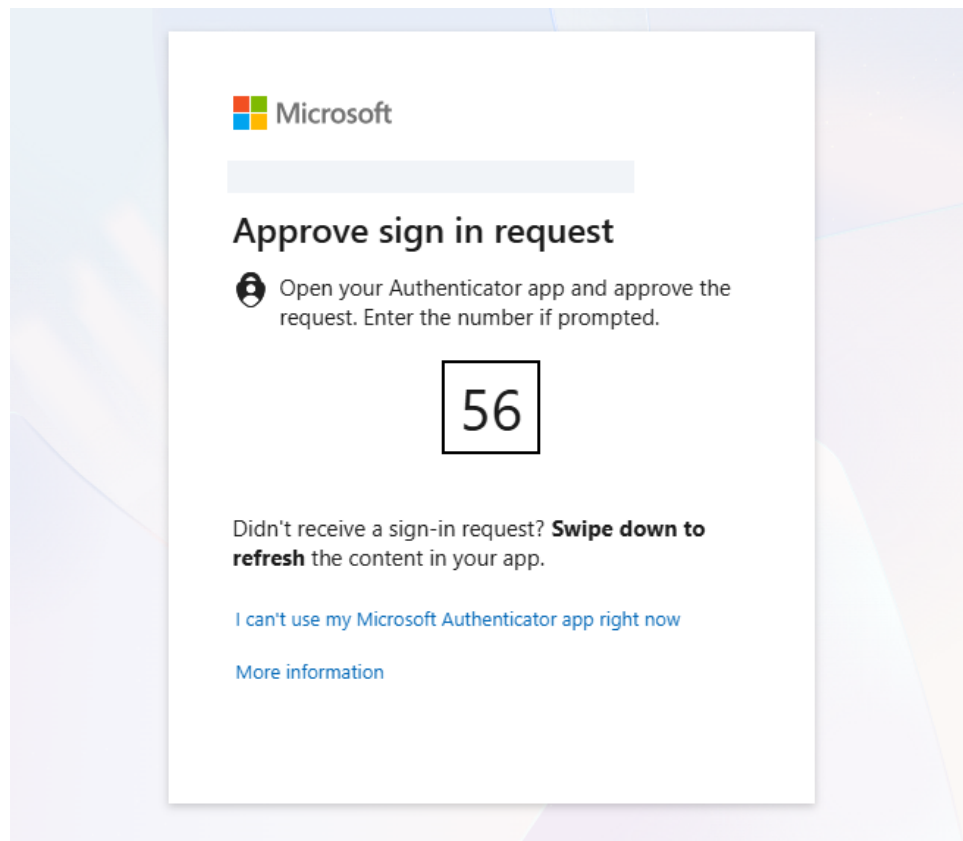

Environment and approach

Microsoft Entra ID, Security Defaults, Microsoft Authenticator, test user Alex Chen, and Entra sign-in logs. The lab involved registration of authentication methods, a number-matching sign-in prompt, and review of sign-in activity after troubleshooting.

Key result

A successful interactive sign-in was recorded and the MFA requirement was satisfied. The successful event states that MFA was **previously satisfied by a claim in the token**; it does not by itself prove a fresh push approval occurred during that particular event.

Evidence 1 — Authenticator number matching

Microsoft presented a number-matching approval challenge for the test account. This captures the MFA challenge, not proof of completed approval.

Evidence 2 — Sign-in investigation

Interactive sign-in logs show failed and interrupted attempts followed by a successful sign-in for the test account.

Evidence 3 — MFA requirement satisfied

Activity Details: Sign-ins

Correlation ID

Is Agent No

Agent type Not Agentic

Agent subject type Not Agentic

Authentication requirement Multifactor authentication

Status Success

Continuous access evaluation No

Additional details MFA requirement satisfied by claim in the token

Troubleshoot event [Launch the Sign-in Diagnostic.](#)

User

User principal name achen@jovarm84gmail.onmicrosoft.com

The successful sign-in record lists multifactor authentication as the requirement and states that it was satisfied by a claim in the token.

Evidence 4 — Authentication details

Activity Details: Sign-ins

Basic info

Location
